

# Granfeel realizes the feeling of a grand piano with an upright piano.

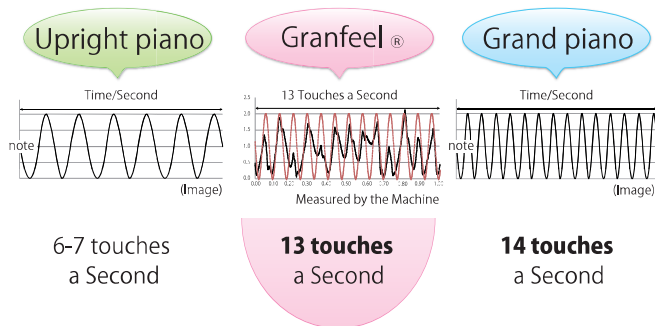

## 1. Improved Function

How much does it need a return of key to generate a next note?

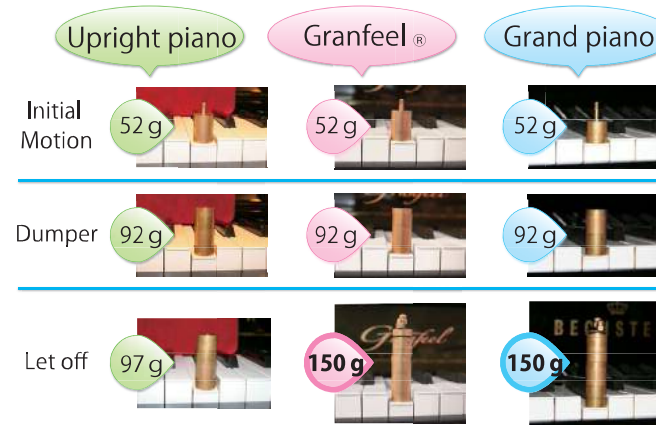

## 2. Enables repeated touching

Smooth trill and repeated touching of keys

## 3. Better Control

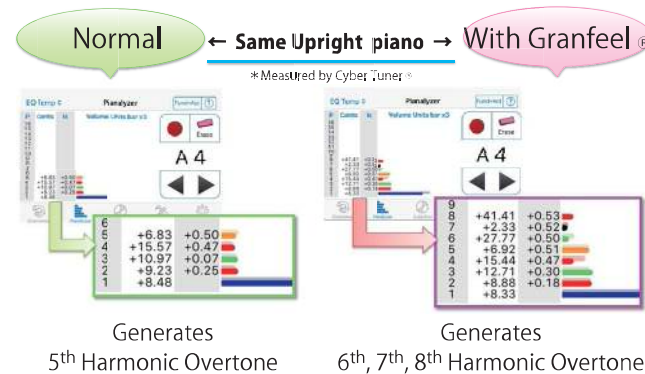

Enables to control the keyboards easily and freely

\*measured by gram weights. The data are averaged.

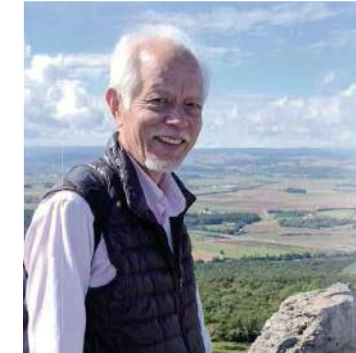

## 4. Higher quality of sounds

Powerful, gorgeous and splendid play

## Background of "Granfeel"

Mr. Fujii started his career as a Repairperson. He broke down and put them up the European Pianos, day after day.

This experience inspired his sense of engineer. He became a piano tuner and listened to his customers' voice. Especially the children who faced the problem of the differences between upright pianos and grand pianos. He determined to overcome the difficulties of upright pianos. After the days of try and error...

## The birth of "Granfeel"

The repetition mechanism for upright pianos invented in 2009 Finally!
